

Y-Circ® P Product Portfolio is growing

Munich, October 2015 - After the successful launch of the Push-Pull circular connector series Y-Circ® P this product family is growing more and more. Now also crimp contacts are available for this Push-Pull connector series.

Yamaichi Electronics has now also started to deliver products with crimp contacts. With the special contact design we are able to combine best functionality and costs in one product. For assembling the contacts in the field a special tooling is available. Additional small tools for contact release can be used to disassemble the contacts in case of wrong assembly. Please contact your sales contact to get more information and check which variant is already available.

About Yamaichi Electronics

Yamaichi Electronics is a market leader for Test & Burn-In sockets, connectors and connection systems. Their reliability and functional dependability are absolutely essential for the success of the overall project. Yamaichi Electronics established themselves on the world market very quickly as a manufacturer of high-quality, reliable components for demanding applications in various markets and applications: semiconductor, industrial automation, automotive, data networking, measurement & testing, medical, mobile computing, consumer, and many more.
