

We build our future

Munich, January 2019 – It is done! Right on time before the turn of the year, we received the approval for the construction of our new plant in Frankfurt an der Oder. Now it is time for the first groundbreaking.

Since 2006 we are manufacturing on the site of the former semiconductor plant in Frankfurt / Oder. The decisive factor for manufacturing in Germany was the location itself. Frankfurt / Oder has a long tradition in the semiconductor industry, which is being continued by the future-oriented establishment of the Leibniz Institute for Innovative Microelectronics. In Frankfurt / Oder, we found the well-trained specialists who make the production of electromechanical components at the highest level possible. Due to our constant growth, it was time to plan for the future and to build our future ourselves! After a long but successful search for a suitable property, the construction work for our modern plant in the commercial area Markendorf starts in January 2019. From 2020 on, we will not only manufacture on the best machines, but also on 6,800 m² in modern industrial architecture.

Anyone who manufactures electromechanical components of the highest technical and quality standards also needs appropriate and perfect conditions. Therefore, the new facility can also be seen as a future motivation and as a thank you for the extraordinary performance of our outstanding employees. From now on, we will inform you regularly about the progress of our new building.

About Yamaichi Electronics

Yamaichi Electronics is a market leader for Test & Burn-In sockets, connectors and connection systems. Their reliability and functional dependability are absolutely essential for the success of the overall project. Yamaichi Electronics established themselves on the world market very quickly as a manufacturer of high-quality, reliable components for demanding applications in various markets and applications: semiconductor, industrial automation, automotive, data networking, measurement & testing, medical, mobile computing, embedded computing, and others.
